Valley Industrial Crane has moved to a new location in North Dayton to better serve our customers. We are also closer to more of our suppliers and only 2 minutes from I-75. This purchase represents our commitment to our customers and the Southwestern Ohio region. Please note our address change:

**2054 Drill Ave.
 Dayton, Ohio 45414**

One of our customers asked us to solve a non-crane problem. We removed a building column to make room for a new machine. The new structure supports the main wooden bridge truss and roof top air unit without any

Pictured above is a 76' span 25 ton double girder crane we installed at one of our customers in Minster, OH. We had previously installed the complete runway system. This customer also contracts with Valley to perform their repairs and annual OSHA inspections.

Valley recently completed the installation of the

13th crane at the new HINO Motors plant in W. VA. We have also erected a relocated truck transfer building at the W. VA. site. The five ton monorail hoists will lift the trucks to allow stacking. The building will provide some protection from the elements. Valley also provides breakdown,

inspection and maintenance services to the facility.

EMH PARTS DISTRIBUTOR

In an effort to better serve their growing installed crane base, EMH, a crane builder located in Valley City, Ohio, has designated Valley Industrial Crane as an authorized spare parts distributor. EMH produces their own hoists, trucks and box girder cranes up to 150 ton capacity.

Valley Industrial Crane recently purchased a new JLG scissors lift with hydraulic trailer to help better service our customers. The new equipment is easier and faster to unload at our customer locations.

AUTHORIZED REPAIR STATION

Valley Industrial Crane was recently recognized by Cervis, Inc. Harmony, PA. as their exclusive IKUSI factory authorized repair dealer for Southwestern Ohio. We're honored to receive this distinction and look forward to selling and maintaining the most reliable radio control systems available. Please call us to service, repair and maintain your overhead crane radio controls.

We can also provide labor and materials to modernize your existing crane:

- IKUSI radio control
- Flat cable festoon systems
- Variable frequency drive control
- New hoist or end trucks

Do you have problems keeping your outdoor crane working? Are dead spots and icing a constant problem? We recently replaced the obsolete conductor bar on a DC scrap yard crane with new Wampfler 1000AMP heated bar. An AC panel with thermostat controls the heater element.

Valley Industrial Crane is positioning itself to be a regional leader in the crane system installation field. We are now erecting systems for several other regional crane builders. We are thrilled with the confidence that these companies have in us. We realize that it is a large, competitive market and see value in partnering with other companies to achieve a successful project completion.
